

Connect Telephone & Computer Group

Project Profile – Beall Trailers

*Giving Beall Trailers **THE POWER TO COMMUNICATE***

- Client: Beall Trailers
- Project Description: Install a long term, cost-effective cabling solution that will handle the needs of today as well as the requirements of tomorrow for a company on the cutting edge of technology.
- Project Challenge Engineer, design, and install a cabling solution in the Billings office which can become a standard for Beall Trailers' facilities throughout the western region.

The communications industry changes daily. Computers become faster and faster. The need to share information throughout the office, state and region becomes increasingly important. Connect Telephone & Computer Group chose the Lucent Systimax structured cabling system to serve as a standard, by which all Beall locations will be mirrored. Through effective use of the system, every location in North America will be identical allowing voice, data and video support to be handled effectively and rapidly from a remote location. Lucent Technologies products provide Beall the ability to stay on the cutting edge of technology without replacing the infrastructure for the next 20 years.

Through proper design and installation, Connect can implement a system for your organization that will adapt to your changing environment. If your organization relies on office communications technology, our integrated voice, data and video systems can assist in turning your business information resources into useable management and administrative solutions.

THE POWER TO COMMUNICATE
