

*Giving Little Horn State Bank **THE POWER TO COMMUNICATE***

- Client: Little Horn State Bank, Hardin, MT
- Project Description: Provide a complete IP telephone system that will link all of their Branches together.
- Project Challenge: Little Horn State Bank has offices in Hardin, Lockwood, Billings and Laurel. They were in need of a solution that could allow all of their sites to function together as one unit.

The phenomenal growth at Little Horn State bank has provided some unique challenges. They need to be able to communicate quickly with other branches to take care of the customers. With their focus on the customer, they saw the benefits of IP Telephony. Little Horn State Bank was also in the middle of building a new facility. The Structured Cabling Team of Connect came in to save the day by finishing the structured cabling project that was not finished by the previous vendor to ensure that Little Horn could move into their new facility on time. For their problem, Little Horn chose The Connect Group and Cisco Systems to handle the job. Cisco's Call Manager and Unity voice processing solution was the best fit for budget, features and productivity enhancements.

From complex voice networks to single line telephones, Connects account consultants will help you secure a platform upon which to build your vision. If your organization relies on office communications technology, our integrated voice, data and video systems can assist in turning your business information resources into productive, cost effective solution.
