

*Giving Little Bighorn College **THE POWER TO COMMUNICATE***

- Client:** Little Bighorn College, Crow Agency, MT
- Project Description:** Provide a complete voice and data system that will allow the college to function on one network.
- Project Challenge:** Little Bighorn College has 5 buildings spread throughout the campus. Our challenge was to support uniformity within their voice and data systems

The phenomenal growth at Little Bighorn College has left their existing telephone system at its maximum expansion, resulting in unacceptable voice system technical difficulties. With the move of voice technology toward IP, Little Bighorn saw several advantages and was able to capitalize on them. Their local area data network is powered by 3Com equipment using state of the art network connectivity, a natural progression to voice was 3Coms NBX IP Voice solution. This system is flexible and allows the functionality demanded by Little Bighorn College. One administration point simplifies the seamless architecture demanded by Little Bighorn College as several locations are pulled seamlessly into one virtual environment.

From complex voice networks to single line telephones, Connects account consultants will help you secure a platform upon which to build your vision. If your organization relies on office communications technology, our integrated voice, data and video systems can assist in turning your business information resources into productive, cost effective solution.

THE *POWER* TO COMMUNICATE
