

*Giving Yellowstone Bank **THE POWER TO COMMUNICATE***

Client: Yellowstone Bank, Billings, MT

Project Description: Provide a complete voice and data system that will allow the bank to function as one throughout the geographic region.

Project Challenge: Yellowstone Bank had a new facility opening in the Spring of 2003. At the same time, they were in the process of a computer system upgrade. Connect was there to accommodate two sizable projects

As Yellowstone Bank has experienced phenomenal growth, their internal Information Systems department has done well to keep the pace. As the technology has moved to IP based networks, Yellowstone Bank saw the advantages and was able to capitalize on them. Their wide area data network is powered by Cisco systems equipment using state of the art intrusion detection and network connectivity. The voice system platform chosen by Yellowstone Bank is the Vodavi Triad line of systems. This system is flexible and allows the functionality demanded by a cutting edge financial institution. The cabling system of choice for the new location is the Avaya Systimax Enhanced Category 5E with a 20 year applications assurance.

From complex voice networks to single line telephones, Connect's account consultants help you secure a platform upon which to build your vision. If your organization relies on office communications technology, our integrated voice, data and video systems can assist in turning your business information resources into useable management and administrative solutions.

THE POWER TO COMMUNICATE
