

Giving the City of Bozeman's Public Library

THE POWER TO COMMUNICATE

Client: City of Bozeman Public Library, Bozeman, MT

Project Description: Design a high speed network delivering Gigabit Ethernet capacity to the desktop

Project Challenge Install over 300 individual cable drops to users within a single facility spread throughout 2 distribution points with high speed backbone cables to connect them together and allow the city the ability to have a fully converged network for their voice, video and data.

Complex voice, data and video networks serving a diverse group of users require sophisticated planning and design, proven products, and a dedication to getting the job done right the first time. Connect Telephone & Computer Group's engineering and network installation teams work closely to deliver communications solutions guaranteed to fit client operating specifications. Utilizing Leviton technology as the structured cabling solution, 5 data closets operate with high speed copper loops to deliver voice, data and video to each desktop user.

From small, closely held firms to large Government agencies, Connect delivers the power to communicate. If your organization relies on office communications technology, our integrated voice, data and video systems can assist in turning your business information resources into useable management and administrative solutions.

THE POWER TO COMMUNICATE
